

Boost Efficiency and Workflows with Spectralink Versity

Upgrading to a Smartphone Benefits Healthcare

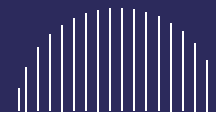

Healthcare technology is constantly being refined as existing products, platforms, and solutions are upgraded and improved. One such upgrade has occurred in the phones used by clinicians to carry out their duties. Many healthcare workers are relying on outdated devices and missing out on the countless advantages of a new breed of smartphones.

While feature phones are fine for texting and making calls, they lack many healthcare applications that can only be utilised via a newer generation device. Switching to smartphones has the power to transform workflows and enable advanced patient care through mobile access to EMR, integrated call and alerting systems, and secure collaboration capabilities, all on a single device.

With the inclusion of barcode scanning, alarms and alerts, EMR integration, and a range of other applications, handheld devices can be used to facilitate communication, streamline workflows, and empower clinicians at the point of care. These benefits can be accessed without sacrificing the reliability and durability that users have come to expect from feature phones.

Why Versity Smartphones over Feature Phones?

Versity is the new breed of phones from Spectralink, the world leader in mobile healthcare technology. The devices include enhanced Wi-Fi capabilities, best-in-class voice quality, and industry-leading durability. The Versity technology and its application integration capabilities continue to adapt to help improve the work lives of your healthcare teams and future-proof your mobility investment for years to come.

Durability and Reliability

- Purpose-built to withstand the demands of healthcare environments.
- Device management through AMIE®, so users can be confident their devices will keep working in high-pressure situations.
- Hot-swappable battery for uninterrupted use.
- Enhanced roaming with a dedicated network antenna, multiple microphones, and noise/echo cancellation.

Application Integration and Ecosystem

- Leading application integration that enables information, notification, documentation, and communication from a single device.
- Reduced burden of documentation by charting at the bedside and accessing info from the EMR from patient monitoring equipment.
- Access to the Android ecosystem of applications.
- An ever-growing list of certified healthcare applications for optimised patient care workflows.

Usability and Form Factor

- Familiar, lightweight, easy-to-use form that slips easily into pockets.
- Large touch screen for easy viewing of EMR and critical healthcare workflows.
- Built-in scanner, eliminating the need for WOWs or separate scanning devices.

Communication and Collaboration

- Secure communication, including voice, text, and collaboration within the EMR.
- The ability to receive alerts to help reduce hospital noise and alarm fatigue.

Transform Your Healthcare Now

Recent advances in mobile devices can help your medical teams access the technological tools that will drive productivity and output. The Versity phone is a compact, durable, and easy-to-use device that can replace a range of outdated equipment. It packs the best healthcare applications allowing clinicians to move around the ward while completing their essential tasks. Far more than just a simple communication device, it has the power to revolutionise the way healthcare is delivered.
